Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

CEF22B5 25823 bp DNA INV 02-SEP-1999 Caenorhabditis elegans cosmid F22B5, complete sequence. 250044 250044.1 GI:899234 Edition factor; GTP-binding ADP-ribosylation

ALIGNMENTS

745. 745. A EST	Current sequence fliishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both dye primer and dye terminator reaction, from distinct subclones Exceptions are indicated by an explicit note. IMPORTANT: This sequence is NOT necessarily the entire insert the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a sequence, or longer because we arrange for a small overlap between neighbouring submissions. The true left end of clone F22B5 is at 24607 in sequence 265522. The true left end of clone F22B5 is at 16002 in sequence 265523. The true left end of clone F22B5 is at 16002 in sequence right end of clone F12B5 is at 4610 in this sequence. The start of this sequence (1101) overlaps with the end of sequence 265523. The end of this sequence (2572325823) overlaps with the star Location/Qualifiers Location/Qualifiers **Corporison** Capacity Sequence** Ca	O'Callaghan, M. Exceptions are indicated by an explicit note. Important: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone C47G2. It may be shorter because we arrange for a small overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Coding sequences below are predicted from computer analysis, using predictions from Genefinder (P. Green, U. Washington), and other
